

Assignment

1. Create a Parent Class Animal and Create a Child Class Cat. Animal should have methods like sound(),sleep(),walk() Cat should inherit the Animal class and access the methods sound(),sleep() and walk()

CODE:

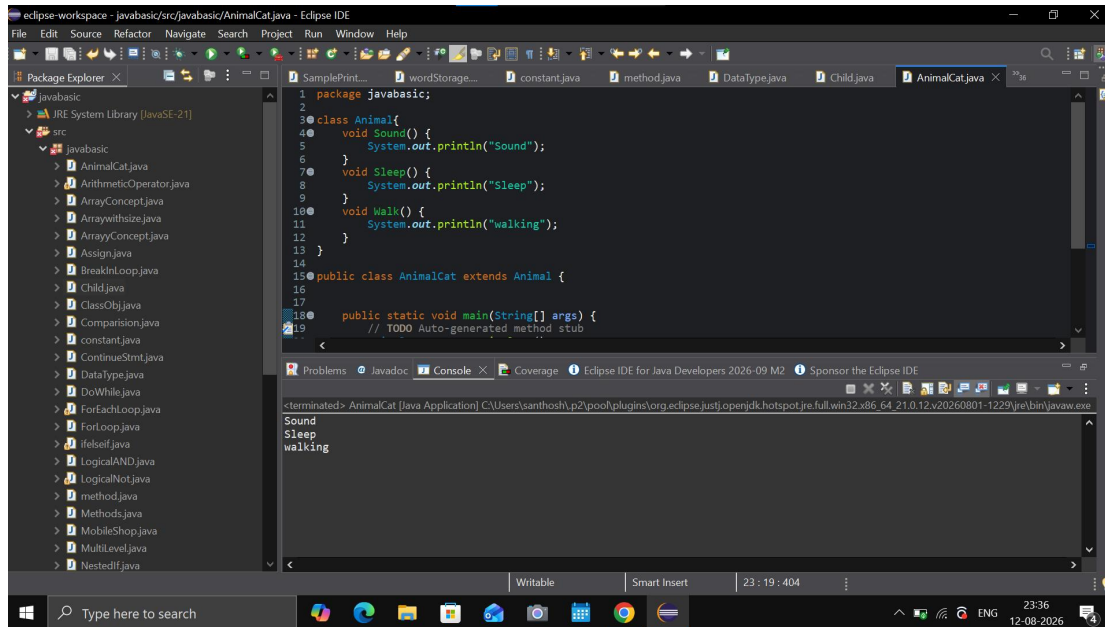

```
package javabasic;
```

```
class Animal{  
    void Sound() {  
        System.out.println("Sound");  
    }  
    void Sleep() {  
        System.out.println("Sleep");  
    }  
    void Walk() {  
        System.out.println("walking");  
    }  
}
```

```
public class AnimalCat extends Animal {  
  
    public static void main(String[] args) {  
        // TODO Auto-generated method stub  
        AnimalCat ac=new AnimalCat();  
        ac.Sound();  
        ac.Sleep();  
        ac.Walk();  
  
    }  
}
```

}

OUTPUT:

The screenshot shows the Eclipse IDE interface. The Package Explorer on the left lists the project structure, including the 'javabasic' package and its sub-packages. The main editor displays the 'AnimalCat.java' file, which contains the following code:

```
1 package javabasic;
2
3 class Animal{
4     void Sound() {
5         System.out.println("Sound");
6     }
7     void Sleep() {
8         System.out.println("Sleep");
9     }
10    void Walk() {
11        System.out.println("walking");
12    }
13 }
14
15 public class AnimalCat extends Animal {
16
17
18     public static void main(String[] args) {
19         // TODO Auto-generated method stub
```

The Console window at the bottom shows the output of the program:

```
<terminated> AnimalCat [Java Application] C:\Users\santhosh\p2\pool\plugins\org.eclipse.justi.openjdk.hotspot.jre.full.win32.x86_64.21.0.12.v20260801-1223\jre\bin\java.exe
Sound
Sleep
walking
```
