

Assignment 3

Use if-else to find the greatest of three numbers.

```
package javabasic;

import java.util.Scanner;

public class ThreeNumbers {

    public static void main(String[] args) {

        // TODO Auto-generated method stub

        Scanner sc=new Scanner(System.in);

        System.out.println("enter first value:");

        int a=sc.nextInt();

        System.out.println("enter Second value:");

        int b=sc.nextInt();

        System.out.println("enter Third value:");

        int c=sc.nextInt();

        if (a >= b && a >= c) {

            System.out.println("Greatest number is: " + a);

        }

        else if (b >= a && b >= c) {

            System.out.println("Greatest number is: " + b);

        }

        else {

            System.out.println("Greatest number is: " + c);

        }

    }

}
```

Implement a calculator using switch statement.

```
package javabasic;

import java.util.Scanner;

public class Switch {

    public static void main(String[] args) {

        // TODO Auto-generated method stub

        Scanner sc=new Scanner(System.in);

        System.out.println("enter first value:");

        int a=sc.nextInt();

        System.out.println("enter Second value:");

        int b=sc.nextInt();

        System.out.print("Enter operator (+, -, *, /): ");

        char op = sc.next().charAt(0);

        switch (op) {

            case '+':

                System.out.println("Addition: " + (a + b));

                break;

            case '-':

                System.out.println("Subtraction: " + (a - b));

                break;

            case '*':

                System.out.println("Multiplication: " + (a * b));

                break;

            case '/':

                System.out.println("Division: " + (a / b));

                break;
```

default:

```
System.out.println("Invalid operator");
```

```
}
```

```
}
```

```
}
```
